

Network Services

Network Design and Management

SITE SURVEYS

Our staff will perform a thorough review of your site and design a solution that is right for you.

EQUIPMENT INSTALLATION

Our staff will install all network infrastructure and data collection devices.

TRAINING

We will instruct your personnel in the proper use and routine care of all network equipment.

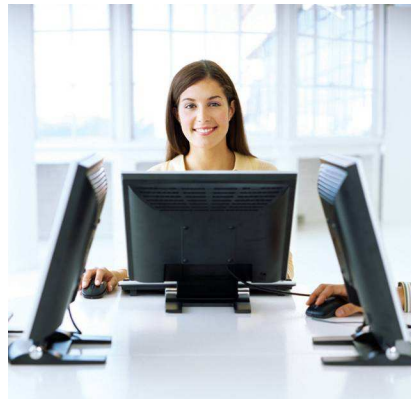

REMOTE SUPPORT

We will perform scheduled maintenance and corrective services via the internet whenever possible...saving you time and money.

ON-SITE SUPPORT

Our tech support staff will come to your site, when needed, to correct issues with any network device.

For more information on any of our products or services please visit us on the Web at:
www.healthsysconnect.com

The foundation for a reliable information system is your technology infrastructure. Appropriate, reliable, durable equipment is essential. Redundancy and security must also be addressed in order to maximize system "up-time".

The staff at HSC will help you to design and implement a network that is right for you. This includes data collection devices, access points, routers, switches, internet connectivity and the training and support to keep it all operating efficiently.

Computers on Wheels(COWs), Kiosks, Notebooks, Thin Clients, iPads, smart phones...we can help you with all of them. We'll even make sure you have all your important equipment connected to the emergency circuits!

System Requirements

- Reliable data collection devices for all staff
- Strong, secure wireless internet connection throughout your facility
- Redundant Internet Connections
- Dual-WAN Router with Failover Functions
- Critical Equipment on Emergency Circuit
- Anti-virus, Anti-Spyware & Intrusion Detection
